NOVA Integration Solutions Introduces a New Product Known as Enclosure Evaluation Service (E-Squared)

Saint Cloud, Florida - August 30, 2013: NOVA Integration Solutions, Inc. (NIS), known in the industry for their advanced electronic packaging, is announcing a new product offering known as their Enclosure Evaluation Service (AKA: E-Squared). Michael Martyniak, VP of Marketing states, "Many of our customers are experiencing enclosure problems and need a technology update. They may run too hot, weigh too much, have mechanical problems and often need an updated power supply. Our new product offering is intended to evaluate the enclosure and to detail these problems together with a comprehensive recommendation to implement the remedies."

The new product offering is ideal for those customers who have a problematic chassis and are fearful on taking any next steps due to legacy issues with older equipment. Limited personnel resources are often assigned to higher priority projects leaving these problematic systems unattended and without remedy. Martyniak continues, "As a custom packaging specialist, NIS is ideally suited to "E-Square" the enclosure and will work in a co-engineering relationship with our Customers to deliver the needed solution."

NIS will perform a full mechanical, electrical and thermal review of your enclosure to determine where it can benefit from any change or improvement. A broad range of Finite Element Analysis (FEA) simulations will be performed using our SolidWorks 3D analysis tool set to determine performance under routine and load conditions. Results are provided in a clear easy to interpret format.
